General Description

Non-metallic FTTH drop cable with up to 12 fibers for outdoor duct, façade or aerial short span installation. Additionally, this cable construction features an intensified tensile forcecompared to the UAF250 construction. What's more, this cable construction has a „Cca" CPR classification and is therefore a true universal cable that can also be installed in buildings without further problems.

Chemical resistance

As a rule, chemical resistance is only required in heavily polluted or potentially hazardous environments. Knowledge of the effects of chemical exposure on the cabling component is of primary importance for the assessment of the suitable product. Put simply, the combination of the intensity and duration of chemical exposure can be interpreted as „chemical exposure“.

Basically, a distinction is made between 3 types of exposure:

- Exposure to less aggressive chemicals
- Exposure to aggressive chemicals
- Exposure to swelling chemicals

The following table gives an overview of the commercially available sheath materials and shall be seen as a simple orientation aid.

Construction Products Regulation

Euro class B2ca and class Cca

Products with very high or high fire protection, no continuous flame propagation, limited fire development, and a limited heat release rate.

Euro class Dca

Products with medium fire protection, continuous flame propagation, moderate fire development, and a limited heat release rate.

Additional classification

Production / density of smoke

There are three classes for smoke production and density in cables:

- s1** weak smoke production
- s1a** **s1** plus transmission value according to EN 61034-2 ≥ 80 %
- s1b** **s1** plus transmission value according to EN 61034-2 ≥ 60 % < 80 %
- s2** moderate smoke production
- s3** potentially strong smoke production

Euro class Eca

Products with normal fire protection, exposure to a small flame may ignite the cable, low resistance to temperature increases.

Euro classification (ca)	Classification criterion	Additional criteria	Assessing and examining the consistency of the performance system
A	EN ISO 1716 Gross heat of combustion		1+ Verification documents: • Type testing • Regular works audit • Regular sampling of ongoing production
B1	EN 50399 Heat release	Smoke production (s1a, s1b, s2, s3) EN 50399 / EN 61034-2

C		Acidity (a1, a2, a3) EN 50267-2-3	
D	EN 60332-1-2 Flame propagation	Flaming droplets (d0, d1, d2) EN 50399	3 Verification documents: • Type testing
E	EN 60332-1-2 Flame propagation		4 No verification documents
F			

Acid production / corrosivity

There are three classifications of corrosivity:

- a1** slightly corrosive fumes
- a2** moderately corrosive fumes
- a3** potentially highly corrosive fumes

Flaming droplets

There are three classes for the production of flaming droplets:

- d0** no flaming droplets
- d1** flaming droplets for a short time
- d2** potentially long-lasting flaming droplets

Recommendations for the future use of EU fire protection classification

First and foremost, the CPR enables a comparison between the fire protection properties of different products. However, every member state is instructed and required to define the minimum necessary fire protection classification for the various applications themselves. The requirements placed on products can thus differ greatly across Europe for each building type. Therefore, the planner must check and comply with the local regulations. Various organizations and international associations have also declared their own recommendations, which sometimes go well beyond the legal minimum requirements.

In consideration of cost vs. benefit, R&M makes the following recommendation:

Euro classification	Additional classification			Fire protection level of the installation cables (Use recommendations from R&M)*
Flame propagation Heat production	Smoke production / density	Acid production / corrosivity	Flaming droplets	
A _{ca}				NA
B1 _{ca}				NA
B2 _{ca}	s1	a1	d1	Very high (e.g. escape routes, tunnels, high-risk industries)
C _{ca}	s1	a1	d1	High (e.g. hospitals, nursing homes, schools)
D _{ca}	s2	a2	d1	Medium (e.g. public buildings, hotels, airports, industrial environments)
E _{ca}				Normal (e.g. normal office buildings, residential premises)
F _{ca}				Low (not recommended)

* The necessary fire protection classification for installation cables is prescribed by the relevant fire prevention authority.
